PROFESSIONAL SUMMARY

Senior Software Engineer with 5+ years of experience architecting high-performance distributed systems. At GE Healthcare, led development of critical imaging platform services, earning 11 impact awards and 2 promotions. At Visa, engineered self-healing Active-Active event queues, multi-datacenter architecture for zero-downtime. Proficient in Java, Golang, Python, containerization, and distributed systems design - applying a GenAI-first approach to architect intelligent, resilient enterprise solutions.

WORK EXPERIENCE

Senior Software Engineer
Visa

July 2025 — Present
Bengaluru, India

- Engineered a self-healing Active-Active Event Queue using Hazelcast IMap and IQueue primitives, providing built-in disaster recovery and seamless failover — eliminating dependency on external message brokers.
- Led the Active-Active architecture implementation of the application, enabling multi-datacenter deployment with real-time data replication and zero-downtime failover.
- Built and optimized job scheduling solutions with deep expertise in Quartz Scheduler internals, customizing open-source quartz to support active-active architecture.
- Architecting an Autonomous Incident Triage system using agentic workflows to reduce incident MTTR.

Senior Software Engineer
GE Healthcare

Oct 2020 — June 2025
Bengaluru, India

- Promoted from Software Engineer to Senior Software Engineer; mentored a team of 5 members as a Technical Lead to deliver PAAS and SAAS based microservices.
- Led the development of scalable microservices and next-generation ATDs (Advanced Technology Developments) for the Imaging Platform, including low-level and high-level design within an event-driven architecture.
- Led the implementation of a microservice to share medical data per the [DICOMDIR](#) international standard, and developed high-performance [STOW](#), [QIDO](#) and [WADO](#) microservices with RESTful and asynchronous workflows.
- Delivered end-to-end Java Undertow and Golang based RESTful Microservice Templates; 31 different services built from these templates are in production to date.
- Spearheaded Java Spring Boot memory optimization, reducing usage by ~70%.
- Led the effort to scale and implement RabbitMQ features with webhooks within a Kubernetes cluster, alongside customized PAAS-based Redis solutions.
- Earned 10 impact awards for focus, collaboration, and entrepreneurial spirit.

SKILLS

- Languages:** Java, Python, Go (Golang)
- Concepts:** Microservices, Software Architecture, Low-Level Design, High-Level Design, BPMN, Database Design
- Frameworks:** SpringBoot, Jersey, Hibernate, Quartz, Flask
- Technologies:** Docker, Kubernetes, RabbitMQ, Redis, Hazelcast, Helm, Postgres
- GenAI:** Agentic Workflows, RAG Pipelines, Vector Databases, Function Calling

EDUCATION

National Institute of Technology Raipur
Bachelor of Technology in Information Technology
CGPA: 8.69/10

Aug 2016 — Jun 2020
Raipur, India

AWARDS & ACHIEVEMENTS

- Received 13 company impact awards across GE Healthcare and Visa, acknowledging exceptional performance in focus, collaboration, and entrepreneurial initiatives.
- Advanced through 2 promotions to secure Tech Lead role, demonstrating consistent performance excellence and leadership capabilities.
- Delivered a tech talk on the self-healing Active-Active Event Queue architecture, showcasing disaster recovery design and Hazelcast-based event-driven patterns.
